

CARINA

CONFERENCE TABLES

TUOHY

Carina Conference Tables

Design: Daniel Tuohy and Matthew Elder

Carina Tables present a comprehensive offering of boardroom and executive level conference tables based on a modular framework of metal components, skinned with a rich palette of elegant materials. Surface materials include the world's finest veneers, harvested from sustainable forests, as well as stone, acrylic, etched and laminated glass, porcelain, metals, solid surface and quartz. Specifiers have broad latitude in deploying the materials horizontally and vertically.

Carina delivers power and data from virtually any floor location below the table to the top perimeter. The interface to users involves a slide-out technology designed for individual or shared use between adjoining seats.

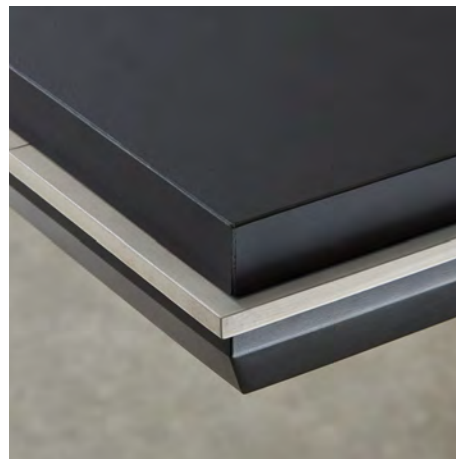

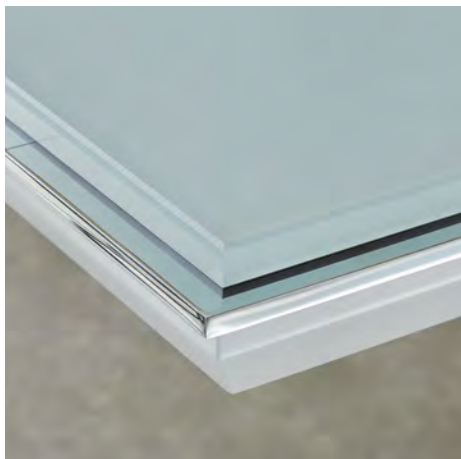

Parametric width dimensions; broad palette of **materials**.

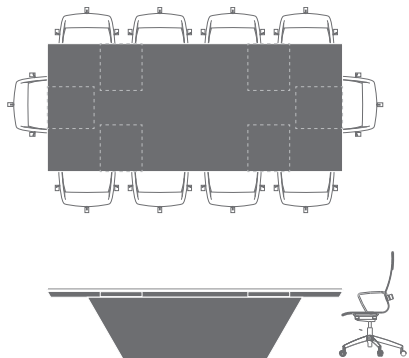

Surface materials include the world's finest veneers, harvested from sustainable forests, as well as stone, acrylic, etched and laminated glass, porcelain, metals, solid surface and quartz. Quality and fit of materials are hallmark to these tables, as is access to the internal technology pathways.

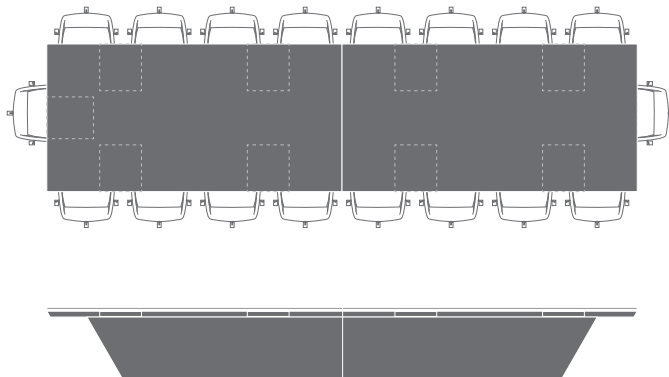

The modular component design is responsive to logistical challenges in installation and allows for complete flexibility for all installation technicians, regardless of the size and configuration of the table.

The table offers superior beauty, performance and functionality, all executed at a very high level.

ELEGANCE WORKS

Carina Conference Tables

Carina Tables offers an iconic form that utilizes superior engineering and fabrication techniques to achieve a product that is substantial in form, and very efficient in its ability to accommodate mixed and varied materials and to deliver power and data efficiently and with ease.

TUOHY's parametric production of these tables allows for ready adaptation of special sizes and accommodation of customer special top materials. Deploying perimeter power and data support frees up the table surface for conference and hospitality use.
