ELEGANCE WORKS

PDA Power-Data Apron

A simple yet elegant means for distributing power and data to single or multiple users in a table setting.

PDA's are modular. The aprons may be specified at any dimension up to 120 inches wide. Power-Data modules are located with spacings typically between 24 to 36 inches.

Power and data modules daisy-chain together in series for single-feed set up.

Aprons are steel angles with a resin finish, punched to receive the power and data modules. Aprons mount to any bottom surface, at any angle, and at any desired setback.
