Nika Tables

Nika tables bring a clean and elegant look to conference and meeting spaces that need to be flexible. They easily reconfigure, fold and nest as needed for the space and activity. In addition, they bring a clean and premium aesthetic, making them perfect for high impression and customer-facing spaces.

Folding and Nesting

Nika tables are easy to fold and nest. Folding and nesting is nearly effortless for quick configurations of the room, while saving space when tables are not in use, even with tables up to 60" deep. Bumpers between tables protect tops from dents and scratches when nesting. A clever ganging mechanism pivots from under each top to easily connect tables together.

Storage and Power

There is ample storage for cords and power supply units in the space below the worksurface. Power to each table is modular and quick-connect for fast changes and reconfigurations. And power cables attach by magnets to the underside of the tables for a clean look. The leg panel easily lifts off to route and conceal cords from the table to the floor.

Movement

Rolling casters are concealed in the base and a stabilizing glide can be simply lowered to keep tables in place while in use as needed.

Finishes

Tops may be specified in a wide variety of veneers and can be ordered with custom wood species and finishes to provide design freedom. This beautiful wood is echoed in the side panel of the leg and is paired with a wide selection of trim finishes. The leg panel can be removed to access cables routing between the top and the floor.

Through a mix of state-of-the-art manufacturing and finishing processes, and time-honored handwork, every detailed is scrutinized for premium quality.
